Three decades after our founders opened a one-room clinic in the remote village of Fond des Blancs, St. Boniface Hospital now spans more than 45,000 square feet and has more than 500 staff. Our clinicians now conduct over 110,000 patient visits each year and our surgeons perform over 3,700 lifesaving surgeries.

The prevailing narrative about Haiti would have you believe that we could never build a fully-functional NICU in this low-resource setting, or develop one of the most comprehensive and long-standing treatment programs for HIV/AIDS in the country. But we knew it was possible, because we never stopped believing that great things can, and do, happen in Haiti. And because supporters like you continue to fight for healthcare as a human right, we have saved—and changed—hundreds of thousands of lives.

As you’ll see in the pages to come, last year we successfully vaccinated 4,500 young women against HPV, reducing their chance of developing cervical cancer later in life. We opened our new Center for Infectious Disease and Emergency Care—the only facility of its kind in Haiti. And when an earthquake damaged northern Haiti in October 2018, we immediately left to help affected hospitals repair broken medical equipment so doctors could tend to the wounded.

Thank you for continuing to stand with us as we work to ensure the people of southern Haiti have access to the high-quality care they deserve. Our unique model for healthcare delivery proves that nobody, no matter where they live, should have to limit their dreams because care is too expensive and too hard to obtain. So let’s continue to set our sights higher, and ask ourselves each day what more we can do to help all people live well.

Kenbe fem,

Conor
IN LOVING MEMORY
OF BRIEL LEVEILLÉ

Briel was a longtime community leader in Fond des Blancs and was instrumental in creating St. Boniface Hospital. In fact, he was the very first community member the founders of SBHF met when they arrived in Fond des Blancs in the early 1980s. From helping children go to school to supporting local farmers, Briel's entire life was dedicated to creating opportunities and sustainable change for his community. In Briel's memory, and in the spirit in which he lived his life, may we continue the work of making the world a better place for all.
What We Do:

St. Boniface Haiti Foundation (SBHF) is a leader in building a sustainable, accessible, compassionate, and high-quality healthcare model in southern Haiti. We treat everything from simple toothaches to complex surgeries—anytime, anywhere.

For over 30 years, our work has grown and transformed the communities we serve. From our humble beginnings as a one-room clinic, SBHF now conducts over 110,000 patient visits each year and provides world-class care that is building stronger, more resilient communities. Of SBHF’s 500+ employees in Haiti, 98% are Haitian—including the entire leadership team in Haiti and nearly all clinical staff. Our community-led approach ensures that all of our work is culturally appropriate and responsive to the priorities of the people we serve. SBHF empowers Haitian professionals to build their careers in Haiti, driving economic prosperity and opportunity across the country.

As SBHF evolves, our mission and values remain the same. We continue to prove what’s possible in southern Haiti. We continue to measure our impact in lives saved, children who survive and thrive, and healthy people who support their families and communities. And now more than ever, we are proving that health can be the catalyst for change in low-resource settings around the world.

2018 BY THE NUMBERS

113,294
OUTPATIENT VISITS
Highest number of patients ever in a single year.

3,770
SURGICAL PROCEDURES
More than 300 lifesaving and life-changing procedures each month.

8,394
EMERGENCY ROOM VISITS
The only ER in southern Haiti providing 24/7 care for emergency injuries and illnesses.

9,987
PRENATAL VISITS
Reducing maternal and neonatal mortality across the region.

0
CASES OF CHOLERA IN THE REGION

5,000+
CHILDREN SCREENED FOR MALNUTRITION

256
PATIENTS TREATED FOR TUBERCULOSIS
From preventative vaccinations to emergency surgery, we provided care to more patients than ever in 2018.

**1,084** babies were delivered by emergency Cesarean section.

Mobile clinics and community health programs bring care directly to the patient.

Decreasing the risk of developing deadly cervical cancer later in life.
HOSPITAL HIGHLIGHTS

We opened new facilities, introduced new services, and improved patient care—all in one year.
Center for Infectious Disease and Emergency Care (CIDEK)

Since the CIDEK opened in March 2018, over 8,000 patients have visited the emergency room and more than 350 patients have been treated for tuberculosis and other infectious diseases. The CIDEK is the first facility of its kind in southern Haiti providing treatment for infectious diseases and 24/7 emergency care. The construction was funded by USAID’s American Schools and Hospitals Abroad program, through the generosity of the American people, and executed by our partners at Build Health International.

Southern Haiti’s First-Ever HPV Vaccination Campaign

In 2018 SBHF’s community health team successfully vaccinated 4,500 girls in southern Haiti against HPV.

This campaign was made possible by Merck, which generously donated the vaccinations. HPV is the primary cause of cervical cancer, which is the leading cause of cancer death for women in Haiti. Thanks to Merck’s donation and our hard-working staff, these girls are now protected from developing this deadly disease later in life.
Quality Improvement Projects in the Neonatal Intensive Care Unit (NICU)

To help our youngest and most vulnerable patients survive, we implemented quality improvement projects in the NICU to reduce hypothermia, prevent sepsis, and ensure timely antibiotic dosing. **By December 2018, the hospital’s overall NICU mortality rate dropped to 13% from 20% in 2017. This is a staggering 15% lower than Haiti’s national average neonatal mortality rate, which was 28.3% in 2017, according to the World Bank.**

New Family Planning Services

Haiti has one of the highest rates of unmet need for family planning in the world. To lower that rate, SBHF opened a family planning outpatient clinic at the hospital in July thanks to generous funding from the Conservation, Food, and Health Foundation.

The clinic is open five days per week and provides counseling on behavioral contraceptive methods as well as access to a broad selection of modern methods. To date, over 3,000 women have received family planning counseling. In addition, SBFH’s community health team has provided family planning education in communities across southern Haiti, reaching over 4,000 people. **Through our family planning program, SBHF has developed a successful model for providing effective and culturally appropriate methods of family planning to meet the needs of our patient population.**
Reparation Pou Amelyore Ekipman Medikal (REPAPE) Program Keeps Hospitals Running

Nearly 80% of medical equipment in low-income countries is donated; most of the time, a majority of the instruments don’t work and hospitals do not have the technicians to fix them. This is a pervasive problem in Haiti that has dire consequences for patients in need of urgent, lifesaving health services. The REPARE program, funded by USAID in partnership with the W. K. Kellogg Foundation and the GE Foundation, trains Haitian technicians to properly diagnose, repair, and maintain medical equipment. Trainees are then employed in medical facilities throughout the country.

This program is helping to build a sustainable, replicable model for managing biomedical equipment throughout the country, and strengthens the economy through job training.

REPARE trainees are already making an impact. In October, a 5.9 magnitude earthquake caused extensive damage to hospitals in northern Haiti. A REPARE trainee in northern Haiti and Tom Monaghan, SBHF Chief Biomedical Engineering Technician, were able to quickly fix medical equipment damaged by the natural disaster. With the repairs they provided, doctors could more effectively tend to the wounded.
Increasing Access to World-Class Surgery in Southern Haiti

SBHF’s unique model of surgical care is proving that world-class surgery is possible in low-resource settings such as Haiti. By cross-training a small group of general surgeons on all procedures, our team is always ready to provide quality care, no matter how sick a patient is or how complex an intervention they need. This model is already reducing patient barriers to care in rural Haiti, and has the potential to change the efficiency of health systems around the world.

SBHF’s skilled surgeons conducted 3,770 surgical procedures in 2018—25% more than in the year before. From emergency Cesarean sections to routine appendectomies, SBHF’s Surgical Center is saving thousands of lives each year.

Without SBHF, the vast majority of people in Haiti would have virtually no access to surgical care. Although there are more than 10 million people living in Haiti, there are only 115 surgeons in the country. Very few care facilities in the country have the capacity to provide surgical care, and those that do charge exorbitant prices that few can afford. Finally, these facilities frequently lack essential medical equipment and supplies, such as anesthesia. But SBHF offers 24/7 surgery for all patients, regardless of their ability to pay.
Everyone who comes to St. Boniface Hospital—patients, families, and staff—has a story. Each story is unique, but they have one thing in common: St. Boniface Hospital has changed their lives.
LIFESAVING SURGERY

29-year-old Delise came to St. Boniface Hospital for severe pain in his abdomen after he was unable to receive care at two clinics closer to his home.

"[Before I came to St. Boniface Hospital,] the health center I went to was able to prescribe me some medications for my pain, but it was a small clinic and it did not have the resources to provide me with the treatment I needed. More recently, when my illness became much worse and I was in severe pain, I went to a clinic close to my home and they referred me to St. Boniface Hospital. I knew that once I arrived [at St. Boniface Hospital], I would find the service I needed.

"I knew that once I arrived [at St. Boniface Hospital], I would find the service I needed."

I came the hospital [and]... I was seen by a surgeon that day. He diagnosed me with a pancreatic cyst, and then gave me a date for surgery two weeks later... When I arrived for the surgery I went to the pre-op room and the surgeons explained the procedure to me. The surgery seemed to pass very quickly, and I am very happy with the results.

I am very happy to have been treated at St. Boniface Hospital. If it were not for this hospital, I would not be able to find the medical care that I needed to heal. I continue to pray for this hospital so that it can find the support it needs to continue to provide help to people in Haiti."
8-year-old Betsaida comes from Flaman, approximately one hour by motorcycle from St. Boniface Hospital. Betsaida has diabetes, which causes her to get sick very quickly. She and her mother come to St. Boniface Hospital at least once per month to manage her diabetes and receive the lifesaving insulin she needs to stay well. Her mother spoke with us about her care.

“We have been coming to St. Boniface for diabetic care for about a year now. Before her diagnosis [last March] we went to many hospitals to seek care, as she was always sick. They would tell us that it was just a stomach ache, but she would never improve. It wasn’t until she was very very sick that she was diagnosed.

“They showed me how to administer her shots and now I give her insulin every day. It is easy to find [insulin] at St. Boniface.”

Last March [2018], she was very sick and fell unconscious [into a diabetic coma], so we rushed her to the hospital in Aquin [a city in southern Haiti near their home] at midnight. By 1 AM they diagnosed her with diabetes and then at 7 AM they sent us to St. Boniface to receive care.

…The hospital sends us with insulin for her to take at home. They showed me how to administer her shots and now I give her insulin every day. It is easy to find [insulin] at St. Boniface… I always come here as soon as I can, so I know that she won’t run out of her medication. Since her diagnosis, this is the only hospital [where] we receive care.”
38-year-old Jean suffered from a form of tuberculosis that impaired his ability to walk and move. For over six years, he could not walk or stand up. After treatment at St. Boniface Hospital’s Spinal Cord Injury Center (SCI), Jean is walking again.

“I have been sick for six years. In every [other] health center… that I tried to find help I would spend a lot of money, and they would refer me to other doctors. Before I came to St. Boniface and I was sick, there were people who wanted to throw me out like a person who had already died. But it was here that I was healed.

“There were people who wanted to throw me out like a person who had already died…It is by the grace of St. Boniface that I stand and walk today.”

I first came into contact with St. Boniface in January 2017, when I spoke to the SCI staff about my condition. [In April], St. Boniface came to my home in Les Cayes to move me to the hospital to receive care at the Spinal Cord Injury Program. When I arrived, I felt like I was no longer alone; I saw other people who were handicapped as well. I sensed that even though I was handicapped, and I was in a wheelchair, people could not take away my personhood.

After 17 months [of treatment at St. Boniface Hospital], I was able to stand up for the first time in six years. It is by the grace of St. Boniface that I stand and walk today.”
Erica* has been a patient in SBHF’s HIV/AIDS program for more than a decade. For the last seven years, she has also been a Treatment Facilitator for the program, helping newly-diagnosed patients understand their treatment program.

“I am there to support them, I am there to show them that they can live a healthy life if they take their medicine, and that there is no reason to be afraid.”

“Before I came to St. Boniface, I used to get care at another hospital [for HIV]. The hospital there was not the best for their patients, and I was pregnant at the time and I knew that I would need additional help for my baby. I asked for help to get to St. Boniface because I didn’t have the means to pay to give birth at a hospital... I was amazed by the way that I was received here and the fact that I didn’t need to pay to give birth, and I was given the opportunity to be in the HIV program... The staff in the program saw how well I was doing and the nurses in the community health department offered me a position at the hospital.

[My] job is extremely important because often people are very afraid when they are given their test results; it can be very overwhelming. But I am there to support them, I am there to show them that they can live a healthy life if they take their medicine, and that there is no reason to be afraid...After some time working with them, the patients start to feel better in the same way that I did. I feel like my job has been done when I see that our patients are no longer discouraged.”

*Name changed to protect the patient’s privacy.
COMMUNITY HEALTH

Miss Claudine Joseph began working at St. Boniface Hospital in 2010 as a social service nurse. In 2014, SBHF helped her to go back to school so she could achieve her dream of working as a community health nurse. Now, Miss Claudine is the Head Nurse for our community health program.

“Working [at St. Boniface Hospital] is the best fit for my own personal values. Here... the patients are seen with compassion... Every person is given the best care that they can receive, and we ask for nothing in return. The values of St. Boniface are the first thing that brought me to this institution.

“St. Boniface works closely with community leaders to ensure that the community is well taken care of... The values of St. Boniface are the first thing that brought me to this institution.”

Fond des Blancs is lucky to have a hospital like St. Boniface in their community. If every community had an institution like St. Boniface I think that they entire country would be doing very well. St. Boniface works closely with community leaders to ensure that the community is well taken care of. It is not solely for Fond des Blancs, but the entire population in the Southern department.”
Dr. Dyemy Dumerjuste is an attending physician in St. Boniface Hospital’s new Emergency Care Center. He has big dreams for emergency care in Haiti.

“St. Boniface is an example of a high functioning hospital that draws the attention of the entire country. We see that people from the entire southern peninsula come to St. Boniface for their healthcare, and when they leave they are truly happy with the services they are provided.

“We see that people from the entire southern peninsula come to St. Boniface for their healthcare, and when they leave they are truly happy with the services they are provided.”

A dream that I have for my patients is to be able to give them better healthcare every day, to grow our capacity to treat the patients who come through our doors. As an attending [physician] in the emergency department, I work to provide continued training the staff in the emergency department, and staff in the hospital too, so that we can provide better healthcare every day.”
Valuable support from donors like you helped to make 2018 a profoundly impactful year for SBHF.

This list of donors represents individuals and organizations that made contributions during our Fiscal Year 2018 (July 2017 through June 2018).

Financials

SBHF ended fiscal year 2018 (July 1, 2017-June 30, 2018) in a strong financial position. The year included a planned spend down of in-kind medicines and clinical supplies that were donated in response to Hurricane Matthew during fiscal year 2017.

In FY18 we began to return to our normal scope, having nearly doubled the size of our operations following Hurricane Matthew in order to aid the entire southern peninsula’s recovery from the storm. We have spent the last year focusing on quality improvements at St. Boniface Hospital, the Villa clinic, and through our community health team. SBHF also made a strategic decision to limit our intake of in-kind donations to medicines and clinical supplies on our formulary in order to make the most efficient use possible of our resources.

To see our audited financial statements and corresponding notes, please visit our website at HAITIHEALTH.ORG/ABOUT/FINANCIALS

SBHF’s work is possible because thousands of individuals and organizations share a single belief: That all people should be able to access high-quality, affordable healthcare, no matter where they live. Thanks to your support, SBHF is building stronger, more resilient communities across southern Haiti and providing a model for healthcare in resource-limited settings around the world.

THANK YOU FOR HELPING US TO PROVE WHAT IS POSSIBLE IN SOUTHERN HAITI IN 2018, AND BEYOND.

BY ENSURING THAT HIGH-QUALITY HEALTHCARE IS AVAILABLE TO ANYONE, ANYWHERE, ANYTIME, WE CAN CHANGE THE WORLD.
